

Sodium Bicarbonate: Aluminum Statement

This letter is to confirm that the manufacture of Genesis's Sodium Bicarbonate (all USP grades) is based on the refining of trona, a naturally occurring mineral. Its purity is >99% with trace naturally occurring mineral content.

We do not test for the presence of aluminum in USP products and therefore cannot state that it is Aluminum free. However, we believe, based on common raw materials and similar processing that its quality would typically be consistent with Genesis's hemodialysis grade Sodium Bicarbonate, which is tested for the presence of Aluminum and meets a specification of 2 ppm or less Aluminum.

Read the product Safety Data Sheet (SDS) prior to using the chemical.
