

Sodium Bicarbonate: Heavy Metals Lead Statement

This letter is to confirm that the manufacture of Genesis Alkali sodium bicarbonate is based on the refining of trona, a naturally occurring mineral. Its purity is >99% with trace naturally occurring mineral content. No metal catalysts or metal reagents are used in the manufacture of Genesis sodium bicarbonate products.

Heavy metals analysis is performed quarterly on non-USP grades of sodium bicarbonate. The test is conducted in accordance with the FCC Lead limit test. It is a “pass/fail” test with a maximum limit of 2 ppm, reported as Lead (Pb). Genesis sodium bicarbonate has not failed this test for the 20+ years it has been conducted.

Read the product Safety Data Sheet (SDS) prior to using the chemical.
