

Sodium Bicarbonate: Shelf-Life Statement

Genesis Alkali sodium bicarbonate (all grades) is chemically stable in prolonged storage when reasonable care is taken. Ideal storage for sodium bicarbonate is a cool, dry environment, away from potential contaminants and odorous materials. Properly stored Genesis Sodium Bicarbonate has a retest date of 3 years. Stability studies conducted at accelerated and long-term conditions confirm the chemical stability of the product for this length of time.

Genesis recommends the use of Sodium Bicarbonate products within one year. This recommendation is made to ensure optimum flow-ability of the product to the end users. Even if stored in ideal conditions, please use your oldest stock first to assure the same performance as the high-quality sodium bicarbonate that was shipped to you.

Read the product Safety Data Sheet (SDS) prior to using the chemical.
